

Nasuni Access Anywhere

An Add-on Service for the Nasuni File Data Platform

Support for a Hybrid Work Force

- 1 Secure, VPN-less access
- 2 Productivity tools including desktop sync
- 3 File transfer acceleration
- 4 Integration with collaboration tools like Microsoft Teams, Office 365, and Slack
- 5 External file and folder sharing

Overview

One of today’s biggest challenges for data storage is the ability to make files accessible to users no matter where they are as organizations continue to support a distributed workforce.

The Nasuni File Data Platform now offers Nasuni Access Anywhere add-on service to strategically address the security and performance needs of hybrid and remote workers.

How it enhances the Nasuni File Data Platform:

When combined with Nasuni’s core platform capabilities, Nasuni Access Anywhere delivers high-performance file access for remote and hybrid (distributed) users along with productivity tools that let them manage files from anywhere on any device. Additionally, integration with collaborative tools provides a seamless workflow across Microsoft Office 365, Microsoft Teams, Slack, and corporate file shares to ensure easy and secure access to critical corporate data.

Prerequisites: Nasuni Access Anywhere add-on service requires the Nasuni Access Anywhere server.

Business Benefits

Simplified hybrid work infrastructure:

Single solution instead of many point solutions that supports remote user productivity, high performance file access and leading collaboration platforms.

Increased user productivity:

Intuitive productivity tools for hybrid and remote users, and projects teams that allow them to synchronize, manage, search, and access files from anywhere.

Enhanced project collaboration:

Frictionless workflow between leading collaboration platforms and corporate file shares backed by limitless, affordable object storage.

Use Cases

Nasuni Access Anywhere offers a comprehensive solution for organizations with distributed workers, and should be deployed to ensure uniform experience is delivered when it comes to corporate file shares across any location.

Offices with limited infrastructure:

Offices with limited infrastructure, often serverless, need a solution that lets users access, search, and collaborate on files, without extra investment in VPN connections and local file servers. Essential to provide access to central file data while maintaining control.

Remote and hybrid users:

Users need to stay in sync with ongoing projects from remote locations. Users often struggle with limited connectivity and require high performance while working remotely and offline. Even with high latency, maintaining connection during file sharing tends to be challenging.

Secure external files and folder collaboration:

Organizations working with clients, contractors, and, joint-venture partners need to share files without compromising control, performance, or security.

Collaboration platform users needing access to corporate file share:

Microsoft Teams, Microsoft Office 365, and Slack users need frictionless access to file shares that complement their workflow across different collaborative tools in a secure environment.

Key Features

PRODUCTIVITY TOOLS:

File Transfer Acceleration: Upload, download, and copy files with remarkable speed despite low bandwidth and network latency. Large files are split into pieces, sent in parallel over multiple streams and reassembled in a continuous file.

Cloud Drive: Works as a network drive, providing local view of remote data. Local cache for folder metadata and active files. Users can also manage locks, share files, and, search from Cloud Drive.

Desktop Sync: Allows access via local desktop file system for working offline.

Metadata Search: Smart data indexing provides the basis for file metadata search.

Remote File Edit: Allows end users to open and edit files through the Access Anywhere web interface directly on the desktop (Windows or Mac). This works independently of back-end storage. Runs on the desktop and makes editing easier.

INTEGRATIONS

Microsoft Teams, Microsoft Office 365, and Slack integration: Store, search, browse, and edit files from within Teams. Edit documents through Microsoft Office online apps.

ACCESS & SECURITY

VPN-less Access: Provides, reliable connectivity to edge file servers over untrusted networks like the Internet without a VPN.

2FA Secure Anywhere: Enables users to copy, move, lock, and share files and folders from the web, desktop, and mobile directly and securely with two-factor authentication.

EXTERNAL COLLABORATION

External File/Folder Share: Users can share content with external parties, and add watermarks to protect documents and maintain authenticity.

ABOUT NASUNI CORPORATION

Nasuni Corporation is a leading provider of file data services. The Nasuni file data platform is a cloud-native replacement for traditional network attached storage (NAS) and file server infrastructure, consolidating file data in easily expandable cloud object storage at a fraction of the cost. Nasuni also eliminates the need for complex legacy file backup, disaster recovery, remote access, and file synchronization technologies, dramatically simplifying IT administration and enhancing worker productivity. Organizations worldwide rely on Nasuni to easily access and share file data globally from the office, home or on the road. Sectors served by Nasuni include manufacturing, construction, creative services, technology, pharmaceuticals, consumer goods, oil and gas, financial services, and public sector agencies. Nasuni's corporate headquarters is based in Boston, Massachusetts, USA delivering services in over 70 countries around the globe. For more information, visit www.nasuni.com.
