

Data migration with Nasuni

A fast, easy, secure transition to the cloud

Overview

Part of any organization's journey to the cloud includes migrating data. Nasuni's Data Migration Services are the pathway to an implementation that eliminates risk, accelerates value, and is elementary to the success of our customers. The experience we have from the hundreds of successful deployments has resulted in the right application of technologies, consulting services, and project scope to ensure a fast and painless migration built on a solid foundation.

Following our methodology we begin the process of transferring our expertise to our customers by educating our customers on architectural best practices with the goal of translating customer operational requirements into an operational deployment. During the process our team makes recommendations for improving the deployment by leveraging our broad experience with more than 700 customers deployed and 1,000s of successful migration projects to apply our innovative solutions to meet the operational requirements for your business.

Our Data Migration Services are right-sized to environments that scale from an organization with a single site with tens of Terabytes to global, multi-national companies with Petabytes of data, hundreds of locations, and thousands of users. In each case we work with our customer to determine the best Data Migration Services that result in the fastest return on investment. The result is an architecture that will support your business at the end of the process and into the future.

Key benefits

Fast: We have improved the duration of data migration by dealing with some of the largest, most complex organizations in the world. Now we include valuable tactics to provide time-to-value migration, compressing data to move your files to the cloud as efficiently and quickly as possible.

Secure: The migration process is a copy where you will not lose data. You can also trust your data will be secure during the migration as Nasuni Professional Services will review various data security features available within Nasuni and your cloud provider.

Reliable: We manage any unexpected interruptions preventing customers from having to start over. If a connection goes down, the service pauses. It will start-back when the connection is re-established providing minimal impact in your operations.

Seamless: Nasuni Professional Services provides the guidance required to ensure the end user experience is seamless and not impacted by the migration.

Scalable: One key advantage of the Nasuni architecture is the ability to "scale out" the migration to run multiple concurrent copy streams.

Key benefits (continued)

Universal: We copy data between different vendors, protocols and sites providing collaboration and accelerating global workflows. We help consolidate siloed storage infrastructures across many locations into one global file system in the cloud.

Easy and collaborative: We build out your team's cloud skills as part of our architecture and planning workshop. Our collaborative approach ensures everyone involved learns the skills they need to succeed in the process.

Migration workflow

Nasuni is here to help your organization every step of the way.

Project kick-off

As part of the pre-sale engagement, the sales team works with customers to gather relevant data points. The more information we have on the nature of your data the better.

Architecture and planning workshop

No two migrations are the same. The standard Nasuni onboarding is collaborative in nature. The Professional Services Engineer works with the customer as a hands-on knowledge transfer during the engagement.

Through our architecture and planning workshop:

- We expose your company to relevant Nasuni components that are needed for deployment
- Professional Services will walk you through preparation of their Nasuni infrastructure

Migration

Various tools may be used to execute the file migration and ingestion process depending on your goals, bandwidth, environment, or availability of resources. Nasuni will ensure your deployment and migration is properly sized and optimized for your use cases.

Live on Nasuni

Once up and running, Nasuni practically runs itself. On average, our customers tell us they spend 60% less time managing their infrastructure. You are consolidating file servers, backup software, sync tools, disaster redundancy, and more; to one simplified Nasuni Management Console.
