

## Data Sheet

# Nasuni Accelerated Implementation Service

Deploy Nasuni faster with the help of a Nasuni Certified Professional.

## Overview

Designed for new customers, the Nasuni Accelerated Implementation Service speeds initial deployment, maximizing the return on your Nasuni investment.

Delivered remotely or on-site, the service shortens the time to full deployment and saves IT time and resources by providing in depth architecture planning and review, data preparation assistance, Edge Appliance implementation, and functional knowledge transfer.

Afterward, you'll be equipped with the knowledge and tools to efficiently complete a global Nasuni deployment.

## Is the Implementation Service Right for You?

This service is ideal for customers who want to quickly deploy Nasuni to relieve file sharing pains and show a quick win with their cloud strategy.

The service is also well-suited for customers that don't have in-house expertise in file sharing best practices or multi-site hybrid cloud deployments.

## How is the Service Delivered?

Nasuni Accelerated Implementation is a fixed price service delivered remotely or on-site by a Nasuni Certified Professional (NCP). Once the service is purchased, your assigned NCP will schedule a kickoff call to discuss your environment and plan your deployment.

*"With 220+ offices in 20+ countries, we have a pretty complex environment. Nasuni's implementation service was a big help to us. It enabled us to rapidly implement the solution and adapt our business processes to get the most out of our cloud transformation. Transferring our massive files between the US and Asia is now much easier and more efficient, as is managing our shares and volumes, now that we have a single, centrally managed global file system."*

Manager, IT Infrastructure  
TEAM Industrial Services

## What's Included

The Accelerated Implementation Service includes:

- Initial survey of environmental and operational implementation requirements
- Architecture and data migration advisory services
- Remote setup of Nasuni Edge Appliances at the first two locations
- Configuration of the Nasuni Management Console (NMC)
- Assistance with integration into the customer's chosen cloud object storage platform and on-premises Active Directory or LDAP environment
- Storage volume implementation plan
- Data migration planning
- Customized Architecture Plan

## Requirements

To ensure successful service delivery and get you deployed as quickly as possible, we rely on your team to complete all prerequisites prior to service inception.

More complex installations may require custom consulting for additional fees.

The service fee is based on weekday work only and the service can be delivered in English or German.

## Service Details

Process	Deliverables
Kickoff Call	Statement of Work (SOW)
Environment Assessment (on-site or remote)	Project Plan
System Architecture Planning and Review	Project Completion Document
Data Preparation Assistance	Functional Nasuni Edge Appliances in two locations
Implementation Validation	Integration with preferred cloud object storage platform
Functional Knowledge Transfer	Integration with local Active Directory or LDAP environment
	Customized Architecture Plan

## About Nasuni

Nasuni enables organizations to store, protect, synchronize and collaborate on files across all locations at scale. Nasuni Cloud File Services™, powered by the Nasuni UniFS® global file system, leverages cloud storage to modernize primary NAS and file server storage; archiving; backup; and disaster recovery, while offering transformational new capabilities for multi-site file sharing. By combining the low cost, unlimited capacity, and durability of object storage from leading cloud vendors such as Amazon, Azure, Dell EMC, and IBM, with the high performance, security, and broad application compatibility of traditional file storage, the Nasuni subscription service improves workforce productivity, simplifies IT operations, and reduces IT costs. The world's largest companies in 12 industry sectors rely on Nasuni to maximize the business value of their file data and ensure business continuity.
