Nasuni Cloud Migration Service

Move file workloads to the cloud faster and accelerate ROI.

Overview

Designed for new and existing customers, the Nasuni Cloud Migration Service assists customers in moving file workloads from existing NAS and file server infrastructure to the Nasuni hybrid cloud platform.

Delivered remotely or on-site, the service helps you properly prepare, plan, execute, and operationalize your unstructured data workloads for deployment on Nasuni and your preferred cloud storage platform.

The service comes in 2 options:

Assisted Migration for customers who want technical guidance as they migrate their file workloads.

Full Migration for customers who want a Nasuni Certified Professional to perform and be fully responsible for the migration.

Is Nasuni Cloud Migration Right for You?

The Nasuni Cloud Migration Service is ideal for customers who want to quickly implement Nasuni to relieve file sharing pains and show a quick win with their cloud strategy.

The service is also well-suited for customers that don't have in-house expertise in file sharing best practices or multi-site hybrid cloud deployments.

How is the Service Delivered?

Nasuni Cloud Migration is a variable priced service based on the amount of capacity to be migrated (per TB). It is typically delivered remotely by a Nasuni Certified Professional (NCP). Once the service is purchased, your assigned NCP will schedule a kickoff call to discuss your environment and plan the migration.

Learn about the full suite of Nasuni Professional Services in the [Professional Services Data Sheet](#)

What's Included

- Initial survey of environmental and operational implementation requirements
- Data migration planning and workload analysis
- Data migration project plan and schedule
- Weekly scheduled touchpoints
- Status reporting
- Production launch readiness validation per use case
- Runbook outlining the initial configuration, Nasuni recommendations, and details uncovered during the project.

Requirements

To ensure successful service delivery and get you deployed as quickly as possible, we rely on your team to complete all prerequisites prior to service inception.

The service is priced per TB. The Assisted Migration option can be purchased in 20 TB blocks. The Full Migration option can be purchased in any TB increment with a 50 TB minimum commitment.

The service is based on weekday work only and the service can be delivered in English or Germ

About Nasuni

Nasuni enables organizations to store, protect, synchronize and collaborate on files across all locations at scale. Nasuni Cloud File Services™, powered by the Nasuni UniFS® global file system, leverages cloud storage to modernize primary NAS and file server storage; archiving; backup; and disaster recovery, while offering transformational new capabilities for multi-site file sharing. By combining the low cost, unlimited capacity, and durability of object storage from leading cloud vendors such as Amazon, Azure, Dell EMC, and IBM, with the high performance, security, and broad application compatibility of traditional file storage, the Nasuni subscription service improves workforce productivity, simplifies IT operations, and reduces IT costs. The world's largest companies in 12 industry sectors rely on Nasuni to maximize the business value of their file data and ensure business continuity.
