

Data Sheet

Nasuni Custom Services

Meet specific business and IT needs on an individual project basis.

Overview

Designed for enterprises with specific needs around unstructured data management or their Nasuni implementations, Nasuni offers custom professional services designed on an individual basis.

Delivered on-site or remotely, Nasuni Custom Services can include independent cloud storage assessments as well as Nasuni-specific services such as custom reporting, scripting, automation, enterprise application integrations, health checks, and merger and acquisition integrations.

Is a Nasuni Custom Service Right for You?

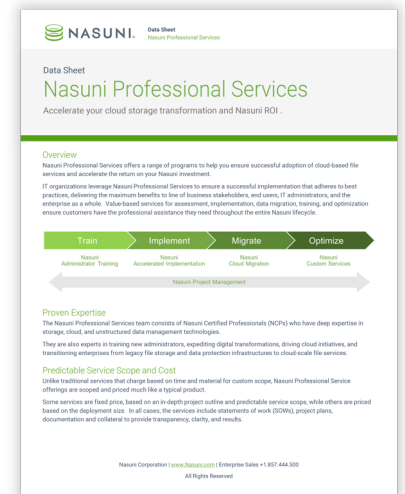

Nasuni Custom Services are ideal for customers who want to build a global file infrastructure that is efficient, cost-effective, and scalable enough to meet business requirements today and in the future.

Custom services are also well-suited for customers who don't have the in-house resources or expertise to evaluate cloud storage platforms on their own or refine their Nasuni implementations.

How are the Services Delivered?

Nasuni Custom Services are build-to-fit, and can be either fixed price or tied to an amount of capacity purchased.

Once the service is purchased, your assigned Nasuni Certified Professional (NCP) will schedule a discovery call to review your environment and create a project.

What's Included

Examples of Nasuni Custom Services include:

- Cloud storage assessments. Having tested and deployed Nasuni with leading cloud storage providers for years, we understand deeply the strengths and weaknesses of each platform and are uniquely equipped to recommend the best one for your specific requirements.
- Custom reporting. We know how to extract data from our platform to meet the most advanced reporting, auditing, and chargeback needs.
- Scripting. Using our own APIs, we can integrate Nasuni with your existing workflow, automation, and alerting and monitoring solutions.
- Health checks. Our experts will evaluate your Nasuni production deployment and ensure everything is optimally configured and aligned with best practices honed from hundreds of other deployments.

Requirements

To ensure successful service delivery and get you deployed as quickly as possible, we rely on your team to complete all prerequisites prior to service inception.

Custom services are based on weekday work only and the service can be delivered in English or German.

About Nasuni

Nasuni enables organizations to store, protect, synchronize and collaborate on files across all locations at scale. Nasuni Cloud File Services™, powered by the Nasuni UniFS® global file system, leverages cloud storage to modernize primary NAS and file server storage; archiving; backup; and disaster recovery, while offering transformational new capabilities for multi-site file sharing. By combining the low cost, unlimited capacity, and durability of object storage from leading cloud vendors such as Amazon, Azure, Dell EMC, and IBM, with the high performance, security, and broad application compatibility of traditional file storage, the Nasuni subscription service improves workforce productivity, simplifies IT operations, and reduces IT costs. The world's largest companies in 12 industry sectors rely on Nasuni to maximize the business value of their file data and ensure business continuity.
